The UFO Chair is the evidence about what MAVIMATT can realize, going also against all the common rules about chairs. The revolution that UFO introduce is about that lie on the ground and release its weight in only one point of its spherical cap, standing perfectly balanced, irrespective of “passenger” or not.

An incredible small foothold engender the slightest friction ratio with the ground, making UFO although its impressive size, an incredible light rocking/turning seat, so much so that you'll can softly push it with your finger to see UFO turning around and gently rocking till it stop.

The majestic UFO size is another thing that allow you to feel that chair in an unconventional way.

You'll can seat and lie down in every direction you want, also staying beside your partner.

The revolutionary concept in the way of feel a seat and unusual ergonomic settings are out of range in what was predictable before for a chair, and it's only the beginning about what UFO is concerning materials and craftsmanship that make it real.
